Heat Molding By Oven

For complete and thorough molding around the entire foot.

This process takes very close attendance. Overheating can cause damage to the boots.

Keep in mind there are two different types of ovens, convection and element. It's important you know what you have. If you are using an element oven you must be extra careful, making sure the boots is in the middle and not touching any of the elements which will melt your boot.

NOTE: you are baking your boots (NOT broiling)

One boot at a time, NO plate can be mounted on your boot.

Getting started:

Remove: Velcro straps and foot beds, unzip zipper if you have the lace cover.

Open laces up enough that you can slip your foot in easily after removing it from the oven.

Be sure tongue is pushed back inside the boot and laces are all tucked in.

Pre-heat oven to 200 Degrees, 93 Celsius

If not going barefoot, have sox or skate SOX on the foot you are molding.

Have chair ready

Heat molding your boot:

Leaving oven on,

Place boot upright, sitting on the rack or baking sheet, center rack, center of oven,

FOR SKATERS BY SKATERS

leave in the oven for 10-15 minutes (CHECKING ON THE BOOTS EVERY MINUTE PAST 10 MINUTES),

Check it, by squeezing the lower ankle area, should be soft/pliable, if it is soft go to next step. If not soft leave it for one minute, repeat this step in one minute increments until soft,

carefully remove the boot from the oven (boot will be HOT),

sitting down, put boot on your foot, carefully putting the tongue in position, tighten laces from the very bottom. Do not over tighten the materials are hot and soft. After laces are tight, stay sitting with your foot flat and your knee bent 90 degree for 15 minutes. (DO NOT STAND UP),

ok to stand after 15 minutes, (DO NOT WALK OR PULL UP YOUR HEEL) takes about 1 hour for the boot to be 100% set. Ok to remove your boot after 25 minutes.

Repeat for second boot.

These are not walking shoes, your heel cup may open and the soles may break if you attempt to walk in them. After you mount them to a plate your Mojo boot and plate will work as one unit with your foot.
